

Delivering your project from proof of concept to production

We undertake all levels of embedded system development on a large variety of architectures; from custom hardware and drivers, embedded applications and middleware, to WinCE, Linux and Windows Desktop - we cover almost anything you can imagine.

Our unique in-depth and expert knowledge combined with our design expertise, puts us in an unrivalled position to be able to assist you with taking your product or idea to the next level. In fact, we can take it from the first idea sketched on the back of an envelope right through to the finished article heading off to production.

Testing

The test requirements for embedded systems have increased dramatically in recent years. Product functions are increasingly shifting towards electronics, and more and more products are being integrated into overarching control structures.

Consultancy

Hitex is your ideal embedded solutions consultant for your development division due to our unrivalled knowledge of the microcontroller industry. We have been experts in embedded solutions since 1976 and have many years of experience from development all the way through to manufacturing and production.

Competencies

- > Mature ISO 9001:2015 approved process-driven design services and implementation structure
- > Hardware and software design, test and validation
- > Hardware design encompassing programmable logic, schematic capture and PCB layout
- > Prototype and production manufacturing
